ITCS216: Fundamentals of Database System (1/2026)

Faculty of Information and Communication Technology

Project Overview: Database Design and Implementation

(Total: 40% of Grade)

In this project, students are required to create a database from design to implementation as a group of **5 members** **for the selected business domain**. The project will be divided into 2 phases, each worth 40 points, including,

- Phase I: Database Design. (**Deadline**: Sun, September 27, 2026)
  - Requirement analysis and Business Domain
  - Conceptual design with Entity Relationship Diagram

- Phase II: Database Implementation (**Deadline**: Sun, November 22, 2026)
  - Relational Database Schema
  - Database Implementation
  - Query
- Project Exam (**Deadline**: To be Scheduled)

Note: The details of each phase will be given sequentially according to the project timeline. Each phase will have its own deliverables. Please read the instruction carefully.

Workshop and Project Session

During the semester, there will be in-class Workshop and Project Session, that students are required to work on the project alongside to instructors

- Each group **must bring your own laptop/notebook** or papers for the session
- Each session provides the **worksheet and deliverable** that students must submit their worksheet for the project at the end of the session.
- The consultation and sharing during the class are encouraged.

Project Consultation

The consultation session for Project will be available on demands. You may visit instructors by appointment or by their office hours. This is NOT required; the session is for those who wants suggestions, feedbacks, and verification. Please prepare your questions and materials for the efficient discussion :)

Score Distribution

- Phase I (include all deliverables) 15%
- Phase II (include all deliverables) 15%
- Project Exam 10%

Penalties for late submission

If you miss the Workshop and Project session or submit in the work late, without a good reason, your marks will be reduced as follow:

- A deduction of 10% of the maximum mark available from the actual mark achieved by you will be imposed upon expiry of the deadline. For example, 10% of 100 marks is 10 marks. If the deadline is 5pm and you submit at 6pm on the same day, your mark of 68 would become a mark of 58 after the penalty.
- A further deduction of 5% of the maximum mark available from the actual mark achieved by you will be imposed on each of the next subsequent day

AI Policy for Projects

To support your learning, you are not allowed to use AI tools during workshop sessions or while completing project assignments. Practicing without AI will strengthen your understanding and skills.

However:

- Grammarly may be used for editing project reports.
- Generative AI tools may be used only to support tasks such as data generation or code debugging (Project Phase II).
- Students are responsible for declaring their use of AI tools if used in all required sections. Failure to disclose AI usage, or any misuse of AI, may result in no credit for the assignment.

Academic Integrity

Please do your own work. Your survival in the subsequent courses heavily depends on the effort that you harvest in this course. Though students are allowed and encouraged to discuss ideas with others and search for online sources, the actual solutions **must be written by your group** without being dictated or looking at others' work. Collaboration in writing solutions with other groups/students is not allowed. It is better to submit an incomplete work that is a result of your own effort than taking somebody else's work for your own credit! Students who know how to obtain the solutions are encouraged to help others by guiding them and teaching them the core material needed to complete the project, rather than giving away the solutions.
