Status	Finished
Started	Thursday, 6 August 2026, 2:13 PM
Completed	Thursday, 6 August 2026, 2:21 PM
Duration	7 mins 15 secs
Grade	**8.00** out of 10.00 (**80**%)

Question 1

Complete

Mark 1.00 out of 1.00

Which of the following is **NOT** an appropriate meaning of data communication?

- a. Sharing digital information according to agreed communication protocols
- b. Exchanging data between two or more connected devices
- c. Transmitting information through a communication medium
- d. Delivering data accurately to an intended destination
- e. Processing data entirely within one isolated computer system

Question 2

Complete

Mark 1.00 out of 1.00

Which statement best describes wireless communication?

- a. Data is transmitted without using any electromagnetic wave or signal.
- b. Data communication does not require encoding or modulation.
- c. Data is transmitted only through copper cables.
- d. Data can be transmitted only by visible light.
- e. Data is carried by electromagnetic waves without a physical wired medium.

Question 3

Complete

Mark 1.00 out of 1.00

Which technology is mainly designed for short-range personal-area communication rather than long-distance telecommunication?

- a. Bluetooth
- b. Telegraph
- c. Television broadcasting
- d. Telephone network
- e. Satellite communication
- f. Radio broadcasting
- g. 5G cellular network

Question 4

Complete

Mark 1.00 out of 1.00

Assume a full-mesh connection is used in an old telephone switching system. If there are 10 customers, how many direct lines are required to connect every customer to every other customer?

Hint: Number of links = n(n – 1) / 2

Answer: 45

Question 5

Complete

Mark 0.00 out of 1.00

Which type of switching is used as the main basis of the Internet?

- a. Package switching
- b. Signal switching
- c. Packet switching
- d. Circuit switching
- e. Multiplex switching

Question 6

Complete

Mark 1.00 out of 1.00

Which statement is **NOT** correct about APANET?

- a. ARPANET was the first wide-area circuit-switching network developed for communication between computers.
- b. ARPANET was developed by the Advanced Research Projects Agency of the United States Department of Defense.
- c. ARPANET was one of the first networks to implement the TCP/IP protocol suite.
- d. ARPANET was an important technological precursor to the development of the modern Internet.
- e. ARPANET initially connected research institutions and universities across different geographical locations.

Question 7

Complete

Mark 1.00 out of 1.00

Which type of switching was mainly used by the traditional telephone network?

- a. Internet Switching
- b. Packet Switching
- c. Signal Switching
- d. Circuit Switching
- e. Package Switching

Question 8

Complete

Mark 1.00 out of 1.00

Which statement best distinguishes telecommunication from data communication?

- a. Telecommunication operates without protocols, while data communication always depends on network communication protocols.
- b. Telecommunication requires telephone networks, while data communication requires only local computer network connections.
- c. Telecommunication supports voice communication, while data communication cannot transmit audio or video information.
- d. Telecommunication uses only analog signals, while data communication always uses digital signals between computers.
- e. Telecommunication covers information exchange over distance, while data communication focuses on digital data between devices.

Question 9

Complete

Mark 0.00 out of 1.00

Which event helped Internet applications become widely accessible to general users?

- a. The adoption of telephone switching for long-distance voice services.
- b. The creation of packet switching for research communication networks.
- c. The development of Ethernet for local area network communication.
- d. The invention of copper cables for digital signal transmission.
- e. The introduction of the World Wide Web and web browsers.

Question 10

Complete

Mark 1.00 out of 1.00

Which development best represents the mobile and cloud era?

- a. Applications became accessible across many devices, with data and services available from anywhere.
- b. Applications stopped using Internet protocols for communication between devices.
- c. Applications became limited to desktop computers inside research laboratories.
- d. Applications depended only on local storage and offline software installation.
- e. Applications returned to isolated systems without remote data access.
