Week 4: Digital Communications – Practice Worksheet

TASK 1 – Analyze Digital Messages

Scenario: Internet Service Disruption

SkyConnect Internet Co., Ltd. is experiencing a major internet outage in Chiang Mai. A damaged underground fiber-optic cable has caused widespread service disruption. Repairs are expected to take up to 7 days because replacement parts are required. Customers need to be informed and supported during the disruption.

In pairs, read each message in the **SkyConnect Messages document.** For each message, identify the audience, purpose, tone/formality, level of detail, and intended outcome.

Message	Audience	Purpose	Tone / Formality	Level of Detail	Intended Outcome
Message 1	Tech Support	Internet issues	Semi-formal	100%	Repair the internet issues within 7 days
Message 2	Customer	Report internet issues	Formal	75%	Customers acknowledge
Message 3	Customer	Report the issues and apologize	Informal	50%	Customers acknowledge
Message 4	Customer	Report the issues and apologize	Extra formal	100%	Customers acknowledge
Message 5	Customer service	Update good news	Semi-formal	100%	Thank you message and updated information to customers
Message 6	Customer	Inform the progress of reparation	Informal	50%	Customers acknowledge

Message 7	Customer	Inform the progress of reparation	informal	100%	Customers acknowledge
Message 8	Customer	Inform the progress of reparation	Extra formal	100%	Customers acknowledge

TASK 2 – Compare the Platforms

In pairs, answer the questions using the messages above.

1. Which platforms were best suited for internal audiences? Why?

Microsoft team because it's easy to track.

2. Which platforms were best suited for external audiences? Why?

Emails, social media platforms because everyone has access.

3. Which messages were the most formal? Who was the target audience?

Website press release and the target audience is customers

4. How did tone and formality change across platforms?

For the social media, it's needed an engagement, so it's chop and informal.

5. How did the amount of information change across platforms?

Some platforms have word limit, so they only give essential information.

6. Which platforms allowed the message to be most immediate?

Microsoft teams, social media

7. Could another platform have been used for any of the messages? Explain.

Call center, sms

8. If you were responsible for communicating the outage, would you change anything? Why?

No, the information was transmitted with details.

TASK 3 – Case Study

System Breakdown at NexonTech

The IT Manager has sent the following message to all employees through **Email.**

IMPORTANT SYSTEM ERROR

Hi everyone,

The internal ticketing system is currently down because the database server has experienced a critical authentication protocol failure and the API gateway is not communicating correctly with the backend infrastructure. The IT team is currently troubleshooting the server configuration and deploying a corrective patch to restore system functionality.

Employees are unable to submit tickets at this moment and all requests are being effected by the outage. Please do not try to restart your computers or change your network settings because this will not resolve the problem.

We expect the system will be restore in approximately 3–4 hours, although this can be change depending on the server recovery process. If you have an urgent IT problem, please sending your request directly to the IT Helpdesk by email.

We apologise for any inconvenient and will provide another update when the system has been restore.

Thanks for your patient.

Yours sincerely

John Grimmish
IT Manager

PART 1

In pairs, improve the message so that all employees can understand it and know what to do.

Check:

- **Audience** – Are the technical terms appropriate for all employees?
- **Accuracy** – Is the information correct and specific?
- **Grammar** – Are the sentences accurate?
- **Readability** – Is the message easy to scan?
- **Tone** – Is it professional and reassuring?

- **Action** – Do employees know what they should do?

Important: Do not change the essential information. Improve **how the information is communicated**.

List at least 10 issues that you think could be improved:

1. The vocabulary should be general and precise,
2. Grammar is incorrect,
3. Typographic is error,
4. The message is packed,
5. No salutation,
6. Cover too much details,
7. Subject line is not clear,
8. lacks the IT desk email,
9. Unnecessary underlining,
10. Appropriate sign-off

Now, rewrite the message with the improvements:

Internal Ticketing System Issue

Hi everyone,
The internal ticketing system is currently down because the database server failure and the API communicating issue. The IT team is currently investigating and working on the problem.

Employees are being affected by the outage. Please do not try to restart your computers or change your network settings because this will not resolve the problem.

We expect the system will be restore in approximately 3–4 hours, although this can be change depending on the server recovery process. If you have an urgent IT problem, please sending your request directly to the IT Helpdesk by email (ITdesk@example.com).

We apologize for any inconvenient and will provide another update when the system has been restore.
Thanks for your patient.

Yours sincerely

John Grimmish
IT Manager

PART 2

Now, individually, communicate the **same situation** to a different audience.

Audience: Senior management

Platform: Email

Purpose: Provide management with a clear **status update**.

Your email should explain:

- what happened
- what the IT team knows about the problem
- the expected repair time
- the potential impact on employees/business operations
- what will happen next

From	JohnGrimmish@example.com
To	SeniorManager@example.com
Subject Line	**Internal Ticketing System Issue Report**

Dear Manager,

I am writing this email to inform the internal ticketing system issue. The ticket system is currently down because the database server has experienced a critical authentication protocol failure and the API gateway is not communicating correctly with the backend infrastructure.

Our IT team is currently troubleshooting the server configuration and deploying a corrective patch to restore system functionality. We expect the system will be restore in approximately 3–4 hours, although this can be change depending on the server recovery process.

During the system outrage, the system might won't respond to customer when using the ticketing feature, we've informed the employee to not reboot the computer and change the network setting, and we've also sent the email to inform the customer.

We will continue fixing the bug and will provide an update when the system has been restore.

Yours sincerely

John Grimmish
IT Manager

PART 3

The ticketing system has now been restored.

Individually, write a short Teams message to **employees** announcing that the system is available again.

Your message should:

- confirm that the system is working
- tell employees when it was restored
- explain what they should do now
- provide a contact point if they still have problems

Ticketing System is now available

Hi everyone,

The internal ticketing system is fixed and available now, thanks to IT support team's effort and all the support from the employee.

The repair takes around 3 hours, 1 hour sooner than we expected, the cause of this issue has been fixed, and the configuration has been updated, also we will push an automatic update patch to everybody's computer tonight.

If your computer still has the ticketing issue, please sending an email directly to the IT Helpdesk by email (ITdesk@example.com).

We apologize for the inconvenient, again thanks to the IT support team and all the employee.

Yours sincerely

John Grimmish

IT Manager
